

## **WATER STOP TAPS**

The water stop tap (brass T-Bar type tap) is located under the kitchen sink or hot-press, please familiarise yourself with this. In the case of a leak in your apartment please turn clockwise to cut off water flow.

### *Definitions*

There are 2 Water Stops taps within any unit of Glasán,

1 – Underneath the sink (this the main feed from outside to the water storage tank, you can isolate any hot/cold tap by turning this off)

2 – In the hot press (this is main feed from the storage tank to an appliance i.e. your toilet or your sink)

*Should you require a demonstration or further information, please enquire at Glasán office*

## **DRAINS / BLOCKAGES**

Please do not throw food waste, fat or oil down the sink, as it will inevitably cause a blockage in the drain. Students are also responsible for unblocking shower drains that may become clogged with hair and debris.

Charges incurred as a result of blockages caused by carelessness will ultimately be payable by the tenant.

## **SANITARY WASTE**

It is important that you do not flush sanitary waste away. This caused major blockages in waste pipes externally. Please dispose of into your bathroom bins and onto the large red bins on site.
